Water Features, Limestone & Cladding

WaterFeatures by Design specialises in the design and construction of all types of internal and external water features, including water walls, ponds and spillways.

Water Features

A water feature is the perfect accessory for every home and garden.

Whether you're after a gentle trickle to soothe your senses, a silent mirror pool to reflect your garden's beauty or roaring cascades of sound to block undesirable noise, there's a water feature design to suit every purpose.

Water features come in every imaginable size and style, and at Water Features by Design, we've built hundreds of them! Be it a raging torrent of water or a bubbling fountain, we've got a design to suit you.

Each feature is custom designed to client specification and incorporates a range of finishes including glass, stainless steel, stone, mosaics, copper and more.

If you've got an existing structural wall we can pre-make some elements of the feature off site and install it on location within a couple of days. If there's no existing wall, the team can construct both the structural wall and the feature on site, and add some planter boxes or limestone feature walls to enhance the design.

WaterFeatures by Design custom-makes every feature meaning no two are exactly alike. We take great pride in our ability to service diverse individual requirements and create a feature that captures the exact look and style the client had in mind.

Cladding & Limestone

In addition to water features we also provide professional stone cladding and limestone construction services including limestone fencing and planter boxes.

If you're keen to create an original and stunning feature wall, why not consider one of the many cladding options currently available. Recent design trends favour the rustic, natural beauty of stone which comes in many different colours and styles, all of which inject a contemporary yet earthy feel into any room - inside or out.

Water Playgrounds

Our service also includes the design, construction and installation of custom-made, interactive water playgrounds for children. Visit the website for details.
