The excitement of sprinkling water, random jets, overhead showers and hours of splashing turn a routine trip to the pool into a magical aquatic adventure.

Interactive water fun parks

Children of all ages can't resist the colour and movement of a custom-designed, interactive water play area.

WaterFeatures By Design has expanded its operations to include the design and construction of safe, interactive, low-maintenance water play areas for children.

Given their safe and customised design, these water play areas are suitable for installation at many locations including:

- public open spaces - parks, ovals, city squares etc
- residential developments
- school yard and council playgrounds
- indoor and outdoor leisure and aquatic centres
- childcare facilities
- backyards
- sporting grounds
- shopping centres
- children's medical facilities - ie hospices, health centres, hospitals

Each water play area is custom designed with a number of standard features included such as:

- no standing water
- completely random sequencing for all water features via pumps and solenoids
- fully recycled and automatically treated water
- exposed aggregate concrete or rubber-based flooring
- unlimited choice of colour schemes, play area themes and layout design

- touch pad activation
- option of interchangeable play area components
- Health Department of WA approval

This page: an outdoor water play area recently installed at the Little Aussies Childcare Centre in Armadale.

The design included installation of non-slip, all-weather flooring along with interactive features such as push-button fountains and a series of timed water spouts for random jets of water.

The area needed to be quite compact to fit the centre's outdoor space and does not require supervision by a lifeguard as the water doesn't pool at a depth of more than a few centimetres.

The client requested a bright, bold colour scheme to match the centre's existing look and one that would appeal to children.

The team at WaterFeatures by Design can create any number of themed water play areas incorporating a range of play structures, tiled and painted backdrops and interactive features for areas of any size.
